## **Consulting – Expert Advice**

An adequate advisory service makes part of purchasing one of our systems or a product.

However, often it is necessary to get advice and to exchange experiences with machine vision experts, independently from a certain project.

This may be the case if you want to solve an image processing task as efficiently as possible or to find the optimal location for your inspection.

We help you to make a decision – fast, clear and competent. Design your inspection processes rational and avoid unnecessary extra costs from the beginning.

## **Vision related Advisory:**

- Process analysis
- Process planning
- Process optimization
- Evaluation of feasibility
- Avoidance of unnecessary extra costs

## **Fast and competent ...**

- Qualified
- Straightforward
- Solution orientated
- On the spot
