Measurement

A core feature of our systems is their precise measurement: up to 1/100 mm. Furthermore, they are easy to use.

Standard or custom made interfaces, for your special requirements guarantee the trouble free and comfortable integration in your fabrication.

Live statistic packages enable you to monitor and to control the production parallel to inspection. The results of the measurements are saved into a database compatible to all major spreadsheet software, such as MS Excel or Sun Staroffice.

We ensure the entire mechanical and electrical integration of the vision system, if desired.

We measure :

- Distance
- Diameter
- Length
- Positions
- Proportions
- Angles

Functionality:

- Control of processes
- Database with results
- Live-Statistics
- Sorting
- Auto feed
